container similar to the shipping container under study for use in the shipment of Plain Text Processing Equipment (PTPE). This new packaging technique can also be used with the standard cardboard carton and foam overpack that is currently being used pending the receipt of a supply of the plastic containers by the Repair and Return Section, OC.

g. Depot Renovations:

- 1. The repaying of the Depot drive is back in first gear. Pouring of concrete was resumed with approximately one-half of the remaining area completed. Grading and related surface preparations of the remainder of the drive are also underway.
- 2. A meeting was held with representatives from Sedlak Corporation to discuss alternatives for Depot expansion based on the preliminary study paper presented to Depot personnel three weeks ago. The study indicated that the Depot needs approximately 15% more space then it has at present just to handle ongoing operations, and if activities continue at their current pace then an additional 50% more space(145,000 sq ft) will be required within the next few years. Joint meetings are underway to determine the most cost effective and efficient approach to take to satisfy our needs on an incremental basis.
